Online Library Pollination Flower To Fruit Answer Key • Pollination occurs when pollen grains from the anther land on a stigma. After pollen grains land on the stigma, a pollen tube grows from the

## **Student Exploration Guide Pollination Flower To Fruit**

Female flowers with tiny fruits should appear soon enough. Normally bees will transfer pollen from the male flowers of one plant to the female flowers of another plant; this is known as cross-pollination. In self-pollination, the male and female flowers of one plant may be used to pollinate on that same plant.

## **Pollination Gizmo | Plant Anatomy Quiz - Quizizz**

Bee pollination is important for growing tree fruits and small fruits. Many tree fruits such as apples and pears are self-incompatible (Table 1). This means two separate cultivars must be planted to produce fruit. For example, a 'Honeycrisp' apple blossom will not set fruit if a bee deposits pollen from a second 'Honeycrisp' apple tree.
